I use IDL for Windows 3.5.1 on a 486. I am able to do display very

I use IDL for Windows 3.5.1 on a 486. We also have IDL 3.0 on a VAX/VMS and I find I can do more on the PC than on the VAX/VMS. A word of advice, make sure you have 8MB of RAM - 16MB would be better. This is one thing I like about IDL. The WIDGETs I write for the VAX work on the PC without any changes.
