Nice idea. While you are making the template you could also catch the errors in the init-block:

```
function init...
    CATCH, Error_Status
    ;Error_Status = 0
    if (Error_Status ne 0) then begin
        ;if (obj_valid(self.complexPlotFont)) then $
    ;    obj_destroy, self.complexPlotFont
        return, 0
    endif

    ;if (self->IDLgrModel::init(_REF_EXTRA=extra) ne 1) then return, 0
    ...
end
```

If you are creating objects for a display then you usually encapsulate everything in a model:

```
pro %NAME%__define
    %NAME% = { %NAME%, $
        ;INHERITS IDLgrModel, $
    ...
end
```
