Hi IDL community,

In the near term, I might be faced with porting my IDL application from a Win95/98 platform over to an Alpha/UNIX combination. I would like to ask if anyone is currently using IDL in this configuration and if there are any outstanding problems/inconsistencies or anything that I should know. A couple of years ago, I was a Sun Solaris user but have lost my edge after being numbed with MS Windows.

I realize that IDL is supposed to be platform independent, but it would appear to be a neat trick to have *everything* work on all platforms.

Thanks for your help,

Bill B.
