```
IDL> a = [1,2,!Values.F_NaN,4,!Values.F_NaN]
IDL> print, a
   1.00000   2.00000      NaN   4.00000      NaN
IDL> print, where(a EQ !Values.F_NaN)
      0       1       2       3       4
```

Hmmmmmm.... is this a known feature? The where() help says
nothin' about NaN's.

IDL v5.2a

Thanks
Todd
