```
IDL> a = [1,2,!Values.F_NaN,4,!Values.F_NaN]
IDL> print, a
    1.00000    2.00000    NaN    4.00000    NaN
IDL> print, where(a EQ !Values.F_NaN)
    0         1         2         3         4
```

Hmmmmmm.... is this a known feature? The where() help says
nothin' about NaN's.
IDL v5.2a

Thanks
Todd
