Dear All,

I'm in big trouble with PV_WAVE.

I have to read a very simple file like this:

37122.00002

37122.00004

37122.00006

...

...

...

...

How can I read numbers with more than six or eight digits?

I tried using Double Precision format but I didn't get any positive result.

Thank you in advance

Daniele
