you may want to get your numbers from RSI rather than Mirosoft ;-)

Nice article! Only one little bit of info missing: what's the file
size for the various versions? I remember some examples when a
preview image would blow up the eps file considerably - and one
could be tempted to conceive that the wonderful TIFF image is somewhat
larger than the others.

I know, I know: GB/\$ is a monotonously increasing function - yet, there
are still some dinosaurs who may want to send files on floppies or who
have steam-powered computers ...

Cheers,
Martin
