Ok, I'm not going to let you guys off that easily! I've got to see an example of this so I can learn how to use the Z buffer, too! Can you put together a simple example of this new image plot on the back wall? Then the mere mortals among us can try to figure out the coordinate transformations and maybe help you avoid having to fiddle it by hand. I must say that David's (and Martin's) sample code for object graphics has got me quaking in my boots. I'm relieved to know that there is a way to do this using direct graphics!
