There was an earlier question about finding the size of the display screen. I am familiar with David's answer:-

```
DEVICE, GET_SCREEN_SIZE = My_screen_size
```

However, I am running under OpenVMS, CDE, Motif with X-windows. In my application, I create displays on a number of display devices using the DISPLAY_NAME keyword to WIDGET_BASE.

Does anyone know how I can find the size of these (remote) displays? Some of these displays are PCs with an X-window emulator, so the resolution may be changed by the users without the knowledge of the system.

Any help would be appreciated,

Ian
