Hi Folks,

I don't know if anyone cares about this at all,
but I wrote earlier today:

- > Apparently my Number Nine Visual Technology
- > Revolution IV 3D OpenGL Accelerated graphics
- > card with 33 MByte of SDRAM, which I paid a
- > LOT of money for, ain't doin' what it says
- > it's doin'. :-(

I downloaded a new driver for this card and
now find that things work with Hardware
OpenGL acceleration as they are suppose to.
However, I've had to select "MCD" rather
than the default "ICD" OpenGL implementation.

Can't find any of this alphabet soup in either
the documentation, README, or Number Nine
web page info. Does anybody have any idea what
this means? I've written to Number Nine technical
support and they assure me I will hear from them
in 5-7 days. Thank goodness for RSI Technical
Support, is all I have to say. :-)

Cheers,

David
