&nbs;p;Hi All,
<p>&nbs;p; currently I am writing a package of software that for some reason
has to keep track of the currently active colortable.&nbs;p; To give the
user a chance to adjust this table,&nbs;p; I am calling (since it all has
to be GUILfied these days...) xloadct - but xloadct itself does not give
back the number of the loaded table.
<p>&nbs;p; Does anybody know how to comfortably obtain this number?&nbs;p;
I know there is XCOLORS which might help via an event,&nbs;p; but I'd rather
rely on standard functions...
<p>&nbs;p; thanks
<p>&nbs;p;&nbs;p; M. Feldt
