Subject: Is there an interactive TVimage out there?
Posted by Karri Kaksonen on Thu, 25 Nov 1999 08:00:00 GMT

Hi,

I have a need to create a widget that is basically TVImage.

On top of TVImage I would like to have some interactive
functionality with the middle-button of the mouse like:

If the middle button is pressed you could adjust the
intensity and contrast of the image.

If Shift+middle button is pressed you can zoom in/out.

If Ctrl+middle button is pressed you can pan around the image.

Does somebody have a similar widget hanging around?
If not, then I probably have to write it.
