David,

Hehe, can you tell I'm a IDL widget beginner? This is my first full blown IDL widget program from scratch. I was pleased that it basically worked as intended but obvious I'm living recklessly! :) Thanks for the advice, I did consider putting the graphics window in a draw widget but, as you noticed, I wanted to have it open in a separate window and was having some difficulty getting that to work properly. I'll dig up a copy of your book and study up. I'm suspicious hat my immediate problem probably is with setting the !X.window variable in the postscript output. Thanks again!

Tony
