Hi all,

this time a hardware question: We are about to buy a number of Linux workstations and shall run IDL as well as Vis5D (www.ssec.wisc.edu/~billh/vis5d.html) on these. Currently we have a choice between ELSA Gloria Synergy and Matrox Millenium 400. We also plan on purchasing AcceleratedX. Does anybody have experiences with these cards and their 3D performance?

Thanks much,
Martin
