In article <3840FFA7.DBCE1F71@hotmail.com>, Marc says...

I was able to make you routine work by setting the /Transparent keyword to the dynamic View definition. So...

```
> v2=obj_new('IDLgrView',VIEWPLANE_RECT=[0,0,512,512])
```

becomes...

```
v2=obj_new('IDLgrView',VIEWPLANE_RECT=[0,0,512,512],/Transparent)
```

I admit, that I don't know what rotations David has identified in your code. But I'm gonna study that code he's posted!

Ben
