
Subject: Free form read from file problem

I'm trying to read from a file free-form. I've defined the structure I want to read, but when I try to read from the file I get:

```
% Input line is too long for input buffer of 2048 characters.  
% READF: Error encountered reading from file. Unit: 100
```

The code fragment is:

```
OPENR, unit, filename, /GET_LUN  
READF, unit, structure_variable
```

Is there a way to change the buffer size? Or is there another way to do free form reads from files? Also, I'm trying this in the 'demo' mode, if that makes any difference.

Thanks,
Mark Cook
