Subject: contour plot with y-x axis switch?
Posted by R.G. Stockwell on Mon, 20 Dec 1999 08:00:00 GMT

A simple question,

I have an array = (10,5000) for instance.
I would like to lot the contour of this array,
like so:

contour,transpose(array)

This is fine, but is it possible to
avoid the tranpose operation and directly
draw the contour plot with the x and y
directions switched?

cheers,
bob
