Subject: Thickening the x-axis

I've been having problems (using PV-Wave 4.01 on a Sun SPARC) getting
the x-axis plotted with a thicker line and thicker tick marks. I'm
using the PLOT and AXIS routines and have tried setting !p.thick and
using the keyword THICK in the routine calls. These only affect the
lines plotted between data points as far as I can see.

Does anyone have any suggestions?

Thanks,

Matthew.
