With IDL 5.3 on WinNT I got:

temp = BYTARR(1000,1000,25, /NoZero) + 10B

1.8230000 Seconds

temp = replicate(10B, 1000, 1000, 25)

6.3290000 Seconds

I got tired of waiting (more than two minutes) for

temp=bytarr(1000,1000,25) ; 0.351 seconds for this much

temp(*)=10
