Subject: How to change directory to a NT server
Posted by Peter Brooker on Thu, 06 Jan 2000 08:00:00 GMT

I am running IDL on an NT.

To move to an nt server I double click on the "Network Neighborhood" and
then select where I want to go.

I know that I can "Map a Network Drive" to a letter such as G: Then I
can use the IDL command "CD" to move to G:

Must I "Map" the network drive in order for IDL to move to it? Can IDL
somehow move to "Network Neighborhood" rather than to virtual drive G: ?

thanks-Peter Brooker
