Hi,

I'm using CDE Motif (X-windows) on OpenVMS, and have a base widget containing a mixture of text,label,list and table widgets.

I notice that the fonts used vary in size for the different types of widgets. This makes the output look messy.

How can I use a constant font size for all of these widgets, within the following constraints:

1) I do not want button or menu fonts changed - I'm happy with these.

2) I do not want to have to use the
WIDGET_CONTROL,DEFAULT_FONT='nnnn' as this would make the application less versatile, and would no doubt invalidate the previous wish.

Thanx in advance,

Ian
