Hy, too,

'Configuration' file? Or 'preferences' file?

In case you have a UNIX version, the preferences file is in
your home directory and called .idlde, for the Windows version
you should look typically for an *.ini file (I have a Windows
version at home, but too far away from here now - maybe tomorrow
I know).

In any case, to me it appears that re-installing IDL would be
the savest way if this does not cause to much inconvenience to
you...

Michael
