
Subject: Path handling in different OSs??

Hi out there,

did anybody bother to write some helpers for handling pathnames under different OSs in IDL (something like "path_to_os") or so? Something that replaces "/" bei "\" or ":" and appends ":" under MAC if needed? Or is there some implemented function in idl which allows accessing directory structures under differing OSs? Just asking, if not, I'll write it myself...

Thanks

Markus
