The problem is to put all sort of text in it. I want to put informaton data about an image: name, dimensions, units, etc.

I've found an instruction called XDISPLAYFILE vey useful, but I have to put the text in a file before show it:

```
XDISPLAYFILE,FILEPATH('info.txt')
```

Also, I don't like the window that XDISPLAYFILE shows, because it has a button on it.

Maybe there is another way to put text in a window.

I've tried to use a Table Widget, but I haven't found information about how to pass information to a table.

Cheers,
Alvaro
