Hi all,

I want to copy and paste text from other sources using the windows clipboard to widget_text field.

Somehow CTRL-C/CTRL-V does not work. I found by accident that I can simply click with the right mouse button in that widget_text field and a menu appears that gives options like Cut,Paste,Copy ... and this works.

I love IDL, sometimes

Anyway, is there any secret hotkey for the keyboard reserved for this ?

Good luck, and thanks, Frank
