I should think Widget_Control, listWidgetID, Set_Value="" would do pretty much what you want. With, perhaps, some kind of check in the list event handler to not respond to any event that generated a null string for a value.

Or, if even this was too much list, you could put the list widget in a bulletin-board base and simply unmap the base widget. This would make the whole thing disappear, no matter how many list items it contained.

Cheers,

David
