I'm not sure if this is the group for PV-Wave CL stuff as I can't find any other groups on my feed abot PV-Wave...

I'm having probs doing menus using wave widgets, to be specific I can't get a pull-down portion of a menu to show in by selected font. The top-level is no prob, using the FONT keyword in the WwMenuBar command, but it dosen't seem to propogate to a sub-menu. I also set the same font as the layout default - no joy.

Can anyone help?

Thanks,
Tam.
