
Subject: WIDGET Q: Button-group forced scroll

Hello,

Is there a way to make the scrollable output of CW_BGROUP forcibly scroll to (say) the middle of the list of buttons?

For example, I have a call to CW_BGROUP that goes somewhat like this:

```
pars_list=cw_bgroupp(base_pars,btlist,/column,/nonexclusive, $  
/return_index,/scroll,set_value=ilist,y_scroll_size=275)  
where BTNLIST is a string array and ILIST is a long array.
```

What I would like to have is a keyword or parameter that says "move the scroll bar such that LIST[SCROLL_TO_INDEX] is shown at the top visible position," something that would work like SET_LIST_TOP does for WIDGET_LIST. (It so happens I can't use WIDGET_LIST in this particular application, for some pretty strong aesthetic reasons.)

Any ideas for workarounds? Hacks?

Thanks much,
Vinay
