thanks for your answer, you are right there exist "Fscale" as an input-parameter.
the example in the printed manuel doesn't use parameter. is a very simple one.
so i came right to submit the values of my errors to the procedure. but now is the
fitting very difficult. it doesn't take a lot of iterations. but the result is
always very close to the starting values and not near the right solution.
does anybody know help?
thanks
