I was wondering if there was a way to use PostScript and Hershey fonts together. I've been using PS fonts exclusively, but there are some symbols in the vector drawn fonts that are not available in the PS Symbol font. It seems that once you've set !p.font, you're stuck with that; is there any way to switch !p.font in the middle of a string definition, say something like:

```
!p.font=0 ; set to PS fonts
```

```
plot,...,title='PS font!9 Math Hershey Font!6PS font again'
```

(I suspect that this might not be possible; I just want to make sure.)
