Smith on Tue, 29 Feb 2000 08:00:00 GMT View Forum Message <> Reply to Message Martin Schultz wrote: > Hallo Reimar! > since I was looking at a similar issue yesterday night, I came across > some > statements about this in the online help. Look for "reading > files:Windows platform" > in the help index. It basically confirms what Craig said. > If nothing else helps and you *really* need to read these ASCII files > > platform-> independently, you'll probably have to resort to reading it as binary > unformatted > into your own buffer, filter all CR's (13B) in case there are any, and > break the > lines at the line feeds (10B). This still leaves out the Mac World, > where they use only CR as far as I know... Or, just read a line at a time, which is platform independent, and how ascii files are normally read. To skip to the nth line: lin=" for i=0,n-1 do readf,un,lin JD
