I am able to create a WIDGET_DRAW too handle an image larger than the screen with scroll bars. The scoll bars work and the image is retained as I scoll around the image. However, when I add CURSOR to the PROCEDURE, the image is no longer retained as I scoll through the image.

Can someone offer a solution o allow me to retain my image and scroll

Can someone offer a solution to allow me to retain my image as I scoll through the image and allow CURSOR to work along with it?
