Hello !

We have a silly problem with Idl fonts: After loading a specific font with device, set_font='...', we cannot go back to the default font because

- a) device, get_current_font=font reports font="" for the default, and trying
- b) device, set_font="" results in an error.

How can we switch back ? Does anybody know what is the default font ?

We tried to guess it with xlsfonts and xfontsel, but no success. We also had a look into the Idl resource file, but also no indication.

Please help !
