
Subject: more for-loops vs. arrays

I also have a For-loop vs. array question.

I want to fill an array with a random sequence of
1's and 0's. This works:

```
array1 = intarr(5,4)
for I=0,4-1 do begin
  for II=0,5-1 do begin
    array1[II,I] = round(randomu(s))
  endfor
endfor
```

but can I do it without for loops?

Thanks.
