Hi !

I'm new in IDL and I am currently trying to figure how I can do beautyfull graphs using object graphics. It looks like these objects allow to draw almost everything I need. But the bad thing is that I did not find how I can export my drawing into a postscript file. In fact there is a way to create an EPS (using ClipBoard on UNIX), but the result is a bitmap ! I want a real postscript with lines, curves, text, etc., in postscript language.

Is there a way to do such a thing ?

Nicolas.
