  aaahhh, pedantic mode is not helpfull
  in the moment, but it will be added before
  launch...

  nowadays most the time I'm hunting in an irregular,
  undiscovered, sometimes hostile data-space,
  interactive in emacs idl-pvwave mode and try to
  survive with hybris and tons of existing or
  'ad-hoc' tools. probably very common...

  I don't want to fight against IDL too --
  but while IDL *promised* an umbrella (i.e. 'heap_gc')
  I was flying into a passion when I got the
  impression, that this umbrella don't work
  just in the case of rain.

  ok, I will go back to C where I'm starting
  fifteen years ago. oh, not really... :-)

  best regards,
  martin rother.
