You've been using IDL for years and you like it! You're the "go-to" person for difficult IDL-related questions in your organization. Perhaps there are even some things about IDL that you wish were different or you think could be better. Here's your chance to do something about it.

We're looking for people with one foot in science and the other foot in programming (and an understanding of both) to contribute to future IDL functionality.

Candidates will be responsible for all aspects of a project from design to development to product launch. Candidates must show attention to detail in their work, have good oral and written communication skills and demonstrate that they work well under pressure as well as in a fast paced team environment. Preference will be given to those candidates that have experience with cross-platform application development under Macintosh, UNIX, and/or Windows (Win32, MFC, COM) using C/C++, and a thorough understanding of IDL programming.

Prior experience in either a scientific or medical field is an asset. Visit our web site <http://www.rsinc.com> for more information and details, or send your cover letter and resume to [jobs@rsinc.com](mailto:jobs@rsinc.com).
