Hello,

 I'd appreciate any ideas from you folks on the possible causes of the
following error message. I'm compiling a shareable object on linux and
I get the following error message when I try to use it. I've
successfully compiled other C routines into shareable objects for IDL
and thought I knew what I was doing. Now I believe it was just luck.

% CALL_EXTERNAL: Error loading sharable executable.
          Symbol: emfit_xy_array, File =
          /home/bpuc/C_code/emfit/betafit.linux.so
          /home/bpuc/C_code/emfit/betafit.linux.so: undefined
symbol:
          emfit_xy_array

The name of the function in the source code is "int emfit_xy_array(int
argc, void *argv)"
