---

suppose I wish to create a structure and wish to reference that structure and its contents via a pointer:

```
filter=ptr_new({points:['a','b'],pt1_value:200, pt2_value:'X_WHYLOG'})
```

how do I reference the points array? I thought it would be as:

```
print, *filter.points
```

but I get the message

%Expression must be a structure in this context: Filter

Thank you for your help!
