
Subject: Linux IDL - Direct Graphics

I installed IDL 5.3 timed demo on a Linux machine (XFree86 3.3.6). It's working, but some functions (window, loadct, plot, tv) do these errors:

Unsupported X Windows visual (class: StaticGray, depth: 0).

Substituting default (class: <UndefinedVisual>, Depth: 0)

And I think it's related with the 'device' comand (Direct Graphics). Object Graphics work fine (the surf_track example is Ok).

I am using 1024x768, 16bpp. I am porting to IDL Linux and if someone could help me, I'll appreciate.

Regards.
