Subject: IDL output->MS PwrPnt for Mac. Not EPS
Posted by atmnjl on Thu, 21 Apr 1994 14:07:43 GMT

Does anyone know of a useful way to take IDL output into MS Powerpoint for the
Mac. I know I could use EPS files, but I would like to have the option of
editing my plots (changing colours, making lines thicker etc.) The alternative
is to write it as a PICT file, however that means going into a bitmap type
format, not what I want.

If I was using MS Windows I could do SET_PLOT,'CGM' and use that. However PP
for the Mac seems unable to read things like CGM,   Does anyone know of a way
to convert any IDL output (HP,CGM, or even EPS) into some clip-art format or
similar that PP for the Mac could read?

The FAQ does not deal with this.

Thanks in advance
