Hi all,

I'm new to IDL and have a question/problem with loading the color tables provided in the file 'colors1.tbl'. I can't seem to load any of these color tables into some Landsat images I have managed to load. I have tried the commands 'xloadct' and 'loadct'. I do not get any errors when I run these but I also don't get the color tables.

Could the file 'colors1.tbl' be corrupt for some reason?

What can I do to isolate the problem further?

SGI Indigo R4000

IDL. Version 3.0.0 (IRIX mipseb)

IDL_DIR = /usr/local/lib/idl

Please respond directly to 'gennari@kestrel.umd.edu'

Thanks in advance,
