Yes, I got a 2 CD set from EROS Data Centre. I tried both ENVI's and IDL's HDF readers. They managed to show what kind of data and the different bands where available. However, when I tried to display the images I got error messages in both ENVI and IDL.

I reported this to RSI, but so far no fix just radio silence.

However, you can display the individual bands. They are simple 8bit binary files. The image size can be picked up from the HDF reader in ENVI.

Kinf regards,
Tony Bauna
