## Subject: IDL, COM/ActiveX, and Python Posted by j vickroy on Wed, 12 Apr 2000 07:00:00 GMT

Hello all,

I am attempting to drive the COM interface to RSI-IDL from Python as follows:

```
>>> o = win32com.client.Dispatch("IDLDRAWX2.IDLDrawWidget.2")
>>> o.IdlPath = "c:\\rsi\\idl53\\bin\\bin.x86"
Traceback (innermost last):
  File "<interactive input>", line 1, in ?
  File "C:\Program Files\Python\win32com\client\dynamic.py", line 413, in __setattr__
      self._oleobj_.Invoke(self._olerepr_.propMap[attr].dispid, 0, pythoncom.DISPATCH_PROPERTYPUT, 0, value)
com_error: (-2147418113, 'Catastrophic failure', None, None)
>>>
```

The following variants were also tried with the same result.

```
o.ldlPath = "c:\rsi\idl53\bin\bin.x86" 
o.ldlPath = "c:/rsi/idl53/bin/bin.x86"
```

I have been working with the vendor (RSI) but they do not have Python expertise and suggested I try this news group to see if any one has used Python and Win NT COM/ActiveX.

I would appreciate any suggestions.

Thanks.
