Subject: Binary Output/Input From/To IDL on PC??????

I produce an array (145,73,10) in IDL. I open an output file (OPENW) and
write out binary data (WRITEU). I try to read the binary output into MS
Fortran PowerStation (on a PC). If I use a Fortran UNFORMATTED open, I get a
wrong file type error in Fortran. If I use a PowerStation BINARY open, it
works. However, only half the input array gets in, the other half is all 0s.
I think it has something to do with the "unformatted" data format.
Suggestions???
I have tried DIRECT ACCESS in Fortran.
I have tried XDR output in IDL.
When I use ASCII output/input all is fine--but I don't want to use ASCII.
Thanks.
