David:

I want it for free :-) . Best solution (for me perhaps not for you): RSI provides a full set of live_** functions which gives me and all the other a simple interface to obj-graphics. With source code included. Some users of my idl programs like to have this "Origin" like features.

I called Creaso (german RSI sales rep) on friday but they said the IDL source of live_** and insight was not available.

Best,

Theo
