Subject: Combine ascii and binary format (i.e. formatted and unformatted)

Hi !

I have (once again) a newbie question.

I need to read files I created using C. They have the following format:
an ascii integer, followed by a blank space followed (with no new line)
by a binary array of double. In C, these files are created like that:

fprintf(fileID, "%d ", myInteger);
fwrite(myArray, sizeof(double), sizeOfMyArray, fileID);

Does someone know how I can read such files with IDL ? I tried, but I
can't figure how to specify the format string to read my integer, the
space after it and nothing else, so that I can get my array with a
simple readu.

Thanks for any help.

Nicolas.
