I fail to RESTORE a datafile that was previously SAVEd in IDL. It can be RESTOREd using IDL 5.0.3 (vms vax), but not 5.3 (vms alpha). I need to work with the 5.3 version. Are these two versions different? What can be done to solve this problem?

Also, the 5.0.3 code involves the fuction ASSOC, but it will not read in the 5.3 verion.

Any insight? Oh, I can also run 5.3 on unix or mac, I think.

Thanks.
