<html>
<tt>Hi</tt><tt></tt>
<p><tt>Do anybody have experience in proccessing AVHRR 1km data using ENVI</tt>
<br><tt>software?</tt>
<br><tt>I'm trying to acheive a "natural color" global map from&nbsp; this
data.</tt>
<br><tt>Right now, I could get a *somewhat* rough result with this assignment:</tt>
<br><tt>band 1 vis = red</tt>
<br><tt>band 2 nir = green</tt>
<br><tt>inverted band 3 ir = blue</tt>
<br><tt>It might be possible to extract better rgb channels using a combination</tt>
<br><tt>of different band for each channel.</tt>
<br><tt>Also need to remove some defects and artifact like clouds.</tt>
<br><tt>Here I've performed a difference of the resulting channels from
data of</tt>
<br><tt>succeeding time periods which worked not so bad but at the expense
of</tt>
<br><tt>disturbing the whole dataset which is not what I want.</tt>
<br><tt>I think there is more specific proccess that could be applied for
this</tt>
<br><tt>but since I'm not a remote sensing specialist, looking at function
like</tt>
<br><tt>"confusion matrix" just confuse me..... ;-)</tt>
<br><tt>Maybe there is already idl script for could removal based on a
pixel by</tt>
<br><tt>pixel analysis of succeeding dataset?</tt><tt></tt>
<p><tt>Any help from experienced ENVI user willing to share a bit of knowledge</tt>
<br><tt>will be greatly appreciated as well as any pointer to web pages
on that</tt>
<br><tt>matter will be welcome.</tt>
<br><tt>Thx</tt><tt></tt>
