Hello,

Thank you for everything you guys have taught me over the last month or so - I have enjoyed being a part of this friendly forum. However, I now have an IDL question of my own.

I have recently encountered a file format which I have no understanding of. The format name is '.MIF' file (Multiple Image File) and it stores movies grabbed off video tape by an old video grabber card.

I wonder if anybody here has experience with this format and can help me read these files.

Thank you for any consideration you give this Email.

Cheers

Stu.
